Abstract

BACKGROUND

Salivary duct carcinoma (SDC) is a rare, extremely aggressive malignancy that arises in the submandibular gland. It can metastasize locally early and therefore is an important differential diagnosis of metastatic disease in cervical lymph

Salivary duct carcinoma. Salivary duct carcinoma, also known as salivary duct adenocarcinoma,

is a rare, typically high-grade malignant epithelial neoplasm composed of structures that resemble

expanded salivary gland ducts. A low-grade variant exists. Incidence rates vary depending upon the

study cited. In the AFIP files, salivary duct carcinomas represent only 0.2% of all epithelial salivary
