### **SPECIFIC COMMENTS TO AUTHORS**

I read this manuscript No. 61540 with great interest. This study evaluated the efficacy and safety of a high concentration of glycolic acid in the treatment of keratosis pilaris, and to observe outcomes at 5-year follow-up. The sample in this study is acceptable. The inclusion and exclusion criteria are reasonable and very clear. The results are very interesting, and well discussed with updated references. Only some minor revisions are required. 1. The manuscript requires a minor editing. Both the language and the format should be revised and updated carefully. 2. Tables should be moved to the end of the manuscript. And please format the tables carefully. Some of the tables are difficult to read. 3. A conclusion is required for the main text. Please conclude it. 4. The references list should be revised according to the journal's guidelines.

1. The manuscript requires a minor editing. Both the language and the format should be revised and updated carefully.

**Answer:** Thank you very much. We updated the format according the journal's guideline. And the language was revised and proofed carefully.

2. Tables should be moved to the end of the manuscript. And please format the tables carefully. Some of the tables are difficult to read.

**Answer:** Thank you. The tables were edited carefully.

3. A conclusion is required for the main text. Please conclude it.

**Answer:** A conclusion was added.

4. The references list should be revised according to the journal's guidelines.

**Answer:** The references list was updated.
