Retrospective Cohort Study

Stapled transperineal repair for low- and mid-level rectovaginal fistulas: A 5-year experience and comparison with sutured repair

Novel Stapled Transperineal Repair Technique for Rectovaginal Fistulas

Abstract

BACKGROUND

Currently, rectovaginal fistula (RVF) continues to be a surgical challenge worldwide, with a relatively low healing rate. Unclosed intermittent suture and poor suture materials may be the main reasons for this.

AIM

Stapled transperineal repair for low- and mid-level rectovaginal fistu

[PDF] Stapled Transperineal Fistula Repair of Rectovaginal ...

<https://journals.sagepub.com/doi/pdf/10.1177/1553350618799452>

Stapled transperineal repair of RVF appears safe and effective. The initial results are encouraging, suggesting the need for a more formal prospective assessment of this technique as part of a randomized trial for the management of **low-** and mid-vaginal **fistulas**. Keywords rectovaginal **fistula**, **transperineal repair**, **stapled** closure

<https://journals.sagepub.com/doi/full/10.1177/1553350618799452>

This study is designed to assess the safety, efficacy, and postoperative outcomes of **stapled transperineal repair** in management of rectovaginal **fistula** (RVF). Methods. A prospective database of patients with RVF undergoing **stapled transperineal repair** between May 2015 and December 2017 was established and studied retrospectively.
