

Response :

Thanks for your comments on our paper .We have revised our paper according to your comments.

Comment 1 :

I checked the surgical records at that time and consulted the relevant surgeons and pathologists. Due to the limitations of surgical technology at that time, only four lymph nodes were removed, so I am sorry that I cannot provide more information. As for the pathological pictures, I have provided the original pictures as required.

Comment 2 :

This is a high magnification view of pancreatic granular cell tumor tissue. HE staining shows that the cytoplasm of granular cell tumor contained eosinophilic granules, and the nucleus is relatively small, round, and biased to the side of the cell.
