

Response to reviews:

It would be helpful to add the references in Table 2 where the data are reported in the columns.

- *The references are now added to the table*

The data content in this paper is lack of references, such as “MEN1 is associated with non-functional pNENs in 80-100%.....and somatostatinomas in 1%.”

- *Reference is now added*

The NCT number can be supplemented where some new clinical trials are involved, such as “Bevacizumab is undergoing trials..... or progressive NETs.”

- *The NCT number is now added*

It is suggested that the content related to molecular mutation characteristics of NENs should be supplemented, especially where it comes to molecular targeted therapy.

- *The molecular characteristics of the tumours in mentioned as a small paragraph before the molecular targeted therapy*

In terms of treatment strategy, especially when it comes to surgical strategy, if the latest guidelines are quoted, please put forward the name and version of the guidelines.

- *Latest North American guideline is quoted in the article in the surgical management*
