**Abstract**

**BACKGROUND**

The procedure for lateral lymph node dissection (LLND) is complicated and can result in complications. We developed a technique for laparoscopic LLND based on two

Initial Clinical Experience with Robotic Lateral Pelvic ...  
<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3499428>  
INTRODUCTION. The presence of lateral pelvic (LP) lymph node metastasis in rectal cancer was first reported in the 1950s [], but the clinical significance, management, and outcome of such cases remain controversial. Currently, lateral pelvic lymph node dissection (LPLD) is not regularly performed in Western countries because preoperative radiation followed by total mesorectal excision (TME) is ...

Jun 20, 2016 · Conventional open lateral lymph node (LLN) dissection performed along the internal iliac vessels frequently results in increased bleeding and postoperative complications [1, 2]. However, laparoscopic LLN dissection is a feasible, oncologically acceptable alternative [3–6]. We have developed a laparoscopic autonomic nerve-preserving technique for LLN dissection based on the ...

>

The lymph nodes draining the rectum below the peritoneal reflection is found to follow two major pathways (a) Along the superior rectal artery and the inferior mesenteric artery into the para-aortic nodes (b) Along the middle and inferior rectal artery into the obturator, internal iliac and external iliac nodes. The majority of the first group of nodes are resected as a part of Total Mesorectal Excision (TME) [1,2]. The second group of nodes, the lateral pelvic nodes, albeit being recognised long before, have triggered a si...

<ales.amegroups.com/article/view/4317/5148> ▼  
Lateral lymph node dissection (LLD) for rectal cancer is a technically difficult procedure. This study aimed to compare the short-term outcomes and the initial oncological outcomes between the robotic-assisted laparoscopic LLD (RALLD) and the conventional laparoscopic LLD (CLLLD) in patients with rectal cancer.
