#### **SPECIFIC COMMENTS TO AUTHORS**

This paper presents a case of a 27-year-old male patient with Left lower pulmonary artery to left atrial fistula. The patient was treated with Amplatzer vascular plug by percutaneous intervention. The case is very interesting and will be helpful in some degree for clinical work. However, the work in this paper is needed to be improved. 1. Is there any follow-up data? If so, please provide it. 2. About the value of pulmonary artery pressure, please provide the mPAP. 3. Numerous grammatical errors need to be corrected. 4. The format of manuscript should conform to the guidelines of the journal. Format is considered as a measure of how carefully work is done.
