<https://pubmed.ncbi.nlm.nih.gov/29922023>

A case of the right pulmonary artery-to-left atrial fistula with atrial septal defect (ASD) is presented. The fistula was detected after the patient developed desaturation following surgical closure of the ASD. It was managed with a transcatheter (trans-RPA route) closure of the fistula using a 12- ...

Device closure of left lower pulmonary artery to left atrial fistula using a vascular plug: A case report

Device closure of left lower pulmonary artery to left atrial fistula using a vascular plug

**Abstract**

**BACKGROUND**

Pulmonary artery to left atrial fistula is a variant of pulmonary arterio-venous fistula and is a developmental anomaly. Delayed presentation, cyanosis and effort intolerance are some of the important features. Diagnosis is confirmed by computed tomography or pulmonary artery angiogram. Catheter based closure is preferred to surgery.

Oct 01, 2020 · **Pulmonary artery (PA) to left atrial (LA) communication** is a unique and rare disease. It usually presents in adult age with symptoms of exertional dyspnea along with cyanosis although in newborns it can present with heart failure. We describe our experience with two cases of percutaneous closure of large **pulmonary artery to the left atrial fistula**.

Transcatheter **fistula closure** with coils was performed successfully. This case underlines that the existence of an isolated **pulmonary arteriovenous fistula** as a right-to-left shunt in patients with cryptogenic stroke should not be overlooked, even if a PFO is present and **pulmonary arteriovenous fistula** is not suggested by the initial physical ...
