SPECIFIC COMMENTS TO AUTHORS

Outstanding case report! Novel surgical intervention! Please clarify and comment: - size and length of metal stent placed? - in my experience placement of a partially covered metal stent followed by a fully covered metal stent one week later prevents stent migration. In this case however the leak was too close to the UES. - was vacuum sponge placed into the cavity? Please correct in Abbreviations: vacuum!

SPECIFIC COMMENTS TO AUTHORS

Dear authors. I read with interest your case report, which I find very interesting in this difficult clinical situation. I wonder if you could make a comment in the article about if the stent placement could have influenced in the development of the infection and fistula, and if closing a leak without surgical or external drainage can contribute to produce an abscess. Congratulations with the case and result.
