#### **SPECIFIC COMMENTS TO AUTHORS**

IT is an interesting case with biliary cancer complicated with acquired hemophilia. The paper indicated that surgeons should pay much attention to this rare condition of coagulation disorder. The perioperative management and authors' experience, lesson should be emphasized and described in details (such as how to avoid anastomotic complications) in the paper so as to provide useful information to authors and improve the patients' outcome.

#### **SPECIFIC COMMENTS TO AUTHORS**

The presented manuscript describes a case of acquired hemophilia, which is characterized by autoantibodies against coagulation factor VIII. I think that this case is well written and informative for readers of World Journal of Clinical Cases. However, it requires some revisions as listed below. 1. The authors upload a picture of swelled thigh, if possible. 2. The authors are recommended to summarize the patient's laboratory data with reference value, as a table. 3. The authors are recommended to upload imaging studies, demonstrating a bile duct cancer, including CT and ERCP, as figures. 4. The authors should describe whether they performed the test to rule out a von Willebrand disease. Definitive diagnosis of acquired hemophilia requires that the von Willebrand disease is ruled out. 5. Discussion section in the manuscript is too long. The authors are strongly recommended to cut someone to the bone and summarize succinctly.
