

Dear reviewers,

First of all, thank you for the review of our manuscript and the suggestions provided. This review has been a very gratifying work.

In response to the suggestions made, we would like to point out the following:

- Section 3 DIAGNOSIS AND TNM STAGING AND 4 CLINICAL INDICATIONS BY TUMOR STAGE AND TREATMENT has been summarized.
- We have included in the text the recent article by Trovo et al (Int J Radiat Oncol Biol Phys. 2021 Apr 1;109(5):1368-76).
- We have included as suggested a typical clinical case of RTE after surgery, with added FIGURES AND TABLES . As we did not know where to include the clinical case, we have included it as an appendix. If you think it is correct, we would have to determine where it should appear in the manuscript. The table and figures of this case have been included in the separate documents of tables and figures.
- After a detailed discussion by all the authors, we consider that since it is a general guide to mesothelioma, although with a special focus on radiotherapy, the sections on RERADIATION and FOLLOW UP should be kept in the final article as they provide a more complete view of the review.
- We have removed a table that was not original

Thank you very much for your work and interest.

Best regards

Dr Luna et al , May 2021
