Small bowel obstruction SBO after TAPP repair caused by a ...<https://academic.oup.com/jscr/article/2018/7/rjy165/5056465>

Jul 20, 2018 · This is a case of SBO by barbed suture used for peritoneal closure. Acute abdominal pain and small bowel volvulus occurred 1 day after surgery therefore in the same day the patient received emergent laparoscopy to release the barbed suture, and derotation of the small bowel was performed without complications.

Small bowel obstruction SBO after TAPP repair caused by a ...<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6054201>

Acute abdominal pain and small bowel volvulus occurred 1 day after surgery therefore in the same day the patient received emergent laparoscopy to release the barbed suture, and derotation of the small bowel was performed without complications. The mechanism of SBO documented in this case is comparable to these described in the literature.

Recurrent abdominal pain due to small bowel volvulus after transabdominal preperitoneal hernioplasty repair: A case report and review of literature

Man Y *et al.* Recurrent abdominal pain after TAPP

Yi Man, Bao-Shan Li, Xin Zhang, Huang Huang, Yin-Long Wang

Abstract

BACKGROUND

Compared with open mesh repair, transabdominal preperitoneal hernioplasty (TAPP) results in less chronic inguinal pain postoperatively and faster postoperative recovery; however, it may still lead to rare but serious complications. Here we report a case of intestinal volvulus with recurrent abdominal pain as the only clinical symptom, which

Transvaginal evisceration of the intra-abdominal organs is a rare emergency event. In this paper, we discuss the case of a 97-year-old female who presented to the emergency department due to **abdominal pain** and a large prolapse with visible extrusion of the **small bowel** per vagina. Past surgical history was significant for a total **abdominal** hysterectomy and surgical repair for pelvic organ ...
