Malignant giant cell tumor in the left upper arm soft tissue of an adolescent: A case report

Malignant giant cell tumor

Abstract

BACKGROUND

Giant cell tumor of soft tissue (GCT-ST) is extremely rare. It is a low-grade ST tumor that is generated from the superficial tissue and rarely spreads deeper. GCT-ST has unpredictable behavior. It is mainly benign, but may sometimes become aggressive and potentially increase in size within a short period of time.

What Is a Soft Tissue Sarcoma? - American Cancer Society

<https://www.cancer.org/cancer/soft-tissue-sarcoma/about/soft-tissue-sarcoma>

Spindle cell tumor is not a specific diagnosis or a specific type of cancer. The tumor may be a sarcoma, or it can be sarcomatoid — meaning another type of tumor (like a carcinoma) that looks like a sarcoma under the microscope. Tumor-like conditions of soft tissue. Some changes in soft tissues are caused by inflammation or injury and can form a mass that looks like a soft tissue tumor.

Adult Soft Tissue Sarcoma Treatment (PDQ ... - cancer.gov

[https://www.cancer.gov/types/soft-tissue-sarcoma/...](https://www.cancer.gov/types/soft-tissue-sarcoma/)

Adult soft tissue sarcoma is a disease in which malignant (cancer) cells form in the soft tissues of the body. Having certain inherited disorders can increase the risk of adult soft tissue sarcoma. A sign of adult soft tissue sarcoma is a lump or swelling in soft tissue of the body. Adult soft tissue sarcoma is diagnosed with a biopsy.
