Unreduced obturator dislocation of the hip. A case report.

<https://www.ncbi.nlm.nih.gov/pubmed/675427>

Apr 15, 1978 · Unreduced obturator dislocation of the hip. A case report. Scadden WJ, Dennyson WG. A patient with a late unreduced obturator dislocation of the hip is reported and the literature reviewed. The diagnosis was confirmed by vaginal examination. An open reduction was necessary and it is suggested that this is best achieved through an anterior approach.

Open Obturator Hip Dislocation: A Case Report and Review ...

<https://journals.lww.com/jbjsc/Abstract/2020/...> ▾

Open obturator dislocations of the hip require a multidisciplinary team. Despite prompt antibiotic therapy and aggressive debridement, patients are at high risk of infection because of the microbial environment in this region. Open obturator hip dislocations are at significant risk of avascular necrosis despite timely reduction.

Old unreduced obturator dislocation of the hip: A case report

Wen-Zhao Li, Jun-Jie Wang, Jiang-Dong Ni, De-Ye Song, Mu-Liang Ding, Jun Huang, Guang-Xu He

Abstract

BACKGROUND

Obturator dislocation is a rare type of hip dislocation, accounting for about 2%-5% of all hip dislocations. The occurrence of old unreduced obturator dislocation is even more infrequent, with only 17 cases reported in nine studies, most of which were from the 1950s to 1980s in developing countries.
