SPECIFIC COMMENTS TO AUTHORS

Dear authors, thank you for submitting your article to World journal of Clinical Cases.

This is a well written case report of Leiomyomatosis Peritonealis Disseminate (LPD), with a clear and broad discussion. LPD is a rare tumor that can mimic a disseminated malignancy and surgeons' knowledge is fundamental for a correct diagnosis and an appropriate treatment. The authors highlight that, although surgery still is the primary treatment for LPD, hormone blockade therapy can be an alternative choice with acceptable results. I believe this case to be fit for publication, serving as a reminder of rare pathological entity.
