SPECIFIC COMMENTS TO AUTHORS

Dear authors, please find below comments: 1. The authors state that “Glans ischemia (GI) has been widely reported in the pediatric literature as a complication following circumcision”. What does this manuscript add to the current knowledge? 2. The authors describe that “Medical history of the child was eventful”, but no further description has been mentioned. A brief and complete description of the patient’s past medical/surgical history should be included here (Case 1, paragraph 1, line 2). 3. A brief description should be added to the discussion/recommendations regarding how long the patients should be followed up. 4. The keywords do not represent the manuscript ideally. Also, they are recommended to be selected according to the related MeSH Terms. 5. Authors could replace some old references with the more recent ones. 6. Although the manuscript is well-written, it could still benefit from native language editing. 7. The signed informed consent seems to be obtained only from one of the reported patients.

RE-REVIEW REPORT OF REVISED MANUSCRIPT
