Maisonneuve Fracture in an Active Duty Sailor: A Case Report

<https://academic.oup.com/milmed/article/183/5-6/e278/4838968>

Feb 05, 2018 • Maisonneuve fractures consist of a medial malleolar fracture or medial ligament rupture, a disruption of the tibiofibular syndesmosis ligaments, and a spiral fracture of the proximal fibula. This injury was classically described by the French surgeon Jules Gilles Maisonneuve and is the result of external rotation force on a pronated, fixed foot ...

Maisonneuve Equivalent Injury With Proximal Tibiofibular ...

<https://pubmed.ncbi.nlm.nih.gov/28117256>

Abstract. We report the case of a 31-year-old male who presented with traumatic dislocation of both proximal and distal tibiofibular joints without fibular fracture. The patient underwent closed reduction of the proximal tibiofibular joint and surgical stabilization of the distal tibiofibular joint. An 18-month postoperative evaluation confirmed a very good clinical outcome after anatomic reduction.

Maisonneuve fracture

Spiral Fracture

The Maisonneuve fracture is a spiral fracture of the proximal third of the fibula associated with a tear of the distal tibiofibular syndesmosis and the interosseous membrane. There is an associated fracture of the medial malleolus or rupture of the deep deltoid ligament of the ankle. This type of injury can be difficult to detect.

Mar 01, 2017 · Combined dislocation of the PTFJ and DTFJ without a fibular fracture is very rare. To the best of our knowledge, it has only been previously reported 3 times. The first case, described by Kumar , was a **Maisonneuve fracture** equivalent with proximal anterolateral tibiofibular dislocation and a medial injury to the deltoid ligamentous complex. The patient underwent closed reduction of the PTFJ, ...

### Maisonneuve injury with no fibula fracture: A case report

Maisonneuve injury with no fibula fracture

#### Abstract

##### BACKGROUND

Ankle syndesmosis injury is difficult to diagnose accurately at the initial visit. Missed diagnosis or improper treatment can lead to chronic complications. Complete syndesmosis injury with a concomitant rupture of the interosseous membrane (IOM) is more unstable and severe. The relationship between this type of injury and Maisonneuve injury, in which the syndesmosis is also injured, has not been discussed in the literature previously.
