**Interpersonal violence: Serious sequelae for heart disease in women**

Violence and heart disease in women

**Abstract**

Experiencing various forms of violence in either childhood or adulthood has been associated with cardiovascular disease, both at short-term and during follow-up, particularly in women. The coronavirus disease-2019 (COVID-19) pandemic has heightened the risk of domestic violence with serious sequelae for mental and cardiovascular health in women, possibly due to several contributing factors, ranging from lockdown, stay at home regulations, job losses, anxiety and stress. Accordingly, it remains paramount to enforce proactive preventive strategies at collective, family, and
