Lateral spread tumor-like primary rectal mucosa-associated lymphoid tissue lymphoma: A case report

Primary rectal MALT lymphoma

Abstract

BACKGROUND

Colorectal mucosa-associated lymphoid tissue (MALT) lymphoma is a rare disease, and only a few cases have been reported to date. It has no specific clinical presentations and shows various endoscopic appearances. There is no uniform consensus on its treatment. With the advancement of endoscopic technology, endoscopic treatment has achieved better results in individual case reports of early-stage patients.

Apr 01, 2016 · Histopathological evaluation revealed **mucosa-associated lymphoid tissue (MALT) lymphoma**. The elevated rectal lesion resolved with rituximab treatment. We report this case because although patients with SjS are at increased risk of **malignant lymphoma, primary rectal MALT lymphoma** is very uncommon in association with PBC and secondary SjS.
