SPECIFIC COMMENTS TO AUTHORS

The authors present a case of hepatic hemangioma treated with both TAE and microwave ablation. The hemangioma markedly shrunk after treatment and this combination treatment seems to be effective. However, there are several issues for acceptance. 1. It is unclear the reason why this hemangioma was treated. Was this hemangioma symptomatic? Did the hemangioma show progression or increase in size during 10 years? 2. The authors should describe the clinical course, such as blood examinations after microwave ablation. Did the patient have any serious complication after ablation? If the authors present the safety and efficacy of the combination treatment, this point should be described in detail. 3. What hepatic hemangiomas should be treated for this combination treatment? The authors should present a recommendation for this combination treatment. 4. Figure 3A and 3C are confused.
