

The crisscross injury mechanism in forearm injuries ...

<https://www.researchgate.net/publication/7914699...>

We report a case of forearm crisscross injury in a child for the first time analyze its mechanism, and use minimally invasive treatment to obtain good therapeutic effects.

Paediatric biepicondylar elbow fracture dislocation - a ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2965708>

Oct 15, 2010 · Taylor et al published the first case in a 9 yrs old girl following a fall whilst horse riding in 1997. The injury was treated with ORIF and K wires. The patient recovered to a painless, stable elbow with full range of motion at six months.

The crisscross injury mechanism in forearm injuries ...

<https://link.springer.com/article/10.1007/s00402-005-0805-7> ▾

Apr 09, 2005 · The **first** part was a cadaveric study of the crisscross **injury** of forearms. The second part was a clinical study of the crisscross **injury** in some **cases** of Mason type II fracture radial head and double dislocation of the radioulnar joint. The cadaveric study confirmed a stable crisscross fracture dislocation **injury** with intact interosseous membrane.

<https://journals.lww.com/md-journal/Fulltext/2019/...>

Leung et al proposed an unrecognized crisscross **injury** mechanism in which they hypothesized that the interosseous membrane might act as a pivot point between the radius and ulna based on the disruption of the proximal radioulnar joint with a concomitant dislocation of the DRUJ. In our **case**, the significant distinguishing feature from the Essex ...
