Jun 01, 2014 · In one study of nearly 500 responses from 1,000 active members of the ASA who were surveyed, 78% reported a preference for an **awake intubation** and **use** of a bronchoscope in **patients** with **cervical spine** injury. 21 A similar survey showed that most respondents favored awake FOI in **patients** with **cervical spine disease** (**ankylosing spondylitis** or rheumatoid arthritis) presenting for elective ...

[Extraluminal bronchial blocker placement using both ...](#)

<https://journals.lww.com/md-journal/Fulltext/2020/...>

A double lumen endotracheal tube or a single lumen tube in conjunction with a **bronchial blocker** is generally **used** for attaining lung isolation via the orotracheal route. [1–3] In the difficult airway, orotracheal intubation using a single lumen tube with intraluminal or extraluminal placement of a **bronchial blocker** is often the preferred choice to achieve lung isolation.
