SPECIFIC COMMENTS TO AUTHORS

This case report is written in a good essay and very interesting. However, there are some points need to be improved. 1. Pheochromocytoma has two main types, high norepinephrine/epinephrine secretion and high epinephrine/norepinephrine secretion. The norepinephrine type affects mainly the cardiovascular system, particularly hypertension, while the epinephrine type affects mainly the metabolism, particularly hyperglycemia. The authors should add this information in the Introduction and indicate the norepinephrine type for this case (as the lab results) in the first paragraph of Discussion. The discussion has already focused on the norepinephrine type. 2. Physical examination must add pulse rate, respiratory rate, and body temperature. 3. Blood and/or urine sugar should be added in the laboratory examinations.
