Retrospective Cohort Study

Could neoadjuvant chemotherapy increase postoperative complication risk on laparoscopic total gastrectomy? A mono-institutional propensity score-matched study in China

Cui H *et al.* Efficiency of NC for LTG

Abstract

BACKGROUND

The potential survival benefit of neoadjuvant chemotherapy in patients with advanced gastric cancer has been widely recognized. With the development of minimally invasive surgery, represented by laparoscopy, the effect of neoadjuvant chemotherapy on the safety of laparoscopic gastrectomy remains to be further explored.
