**Manuscript ID: 62523**

**Chances and Risks of SGLT-2 inhibitors in Solid Organ Transplantation: a Review of the Literature**

Dear Editor

We are pleased to see the positive comments on our manuscript and here submit our revised work for additional review and publication in your Journal. Please find below our point-by-point reply.

**Reviewer 1: Critique and Point-by-Point Reply**

**Reviewer:** The reviewer suggested to reduce the introduction about general DM complications in favor for specific PTDM complications.

**Reply:** We reduced the introduction on general DM complications. There is very limited literature about specific risk factors for transplanted patients. We included diagnostic criteria for PTDM and a short chapter on potential diabetogenic effects of different immunosuppressive drugs. We included the proposed article by Jin et al.

**Reviewer:** The reviewer mentioned non-defined abbreviations and typos in the manuscript

**Reply:** We reviewed and reduced the number of abbreviations and corrected typos.

**Scientific Editor: Critique and Point-by-Point Reply**

**Reviewer:** The introduction should be reduced

**Reply:** See above, we reduced the introduction part.

**Reviewer:** PMID and DOI numbers are missing in the reference list.

**Reply:** changes were made

Sig, PD Dr. med. et phil. Daniel Sidler
