**Spinal dural arteriovenous fistula 8 years after lumbar discectomy surgery: A case report and review of literature**

Yang OuYang et al. spinal dural arteriovenous fistula

## Abstract

### BACKGROUND

Spinal dural arteriovenous fistulas (SDAVF) is an extremely rare vascular malformation of the central nervous system that is often confused with degenerative spinal disorders due to similar early symptoms and clinical features. Here, we report a case of SDAVF recurrence 8 years after lumbar spine surgery and summarize relevant literature.

### CASE SUMMARY

A 54-year-old male was admitted to our hospital complaining of lower back pain.

SDAVF, or intradural dorsal arteriovenous fistula, is an acquired pathology and the most common type of abnormal spinal arteriovenous shunt.[2,5] It is usually a low-flow shunt draining in a radicular vein inside a dural nerve root sleeve. The feeder artery, usually a radicular artery supplying only the dura mater and nerve root, is, as a rule ...

Aug 01, 2019 - Surgery for degenerative disease in the cervical spine is a relatively common procedure. A few reports have described postoperative dural arteriovenous fistula (DAVF) as a late complication after lumbar surgery 1, 2, 3, 4, 5, 6; however, formation of a DAVF in the cervical spine after such surgery is extremely rare.
