### Reviewer #2

**Specific Comments to Authors:** This is a well-written paper summaries the main epidemiological aspects of Celiac Disease in Asia, outside the Indian subcontinent and Middle East countries. I have only minor suggestions. Please refer that recent study show that IgA tTG titres of  $\geq 10 \times \text{ULN}$  have a strong predictive value at identifying adults with intestinal changes diagnostic of CD. This study supports the use of a no-biopsy approach for the diagnosis of adult CD. It may be useful in countries without standardized diagnostic and endoscopic protocols Gut. 2020 Nov 2;gutjnl-2020-320913. doi: 10.1136/gutjnl-2020-320913.
