**Imaging diagnosis of bronchogenic carcinoma (the forgotten disease) during times of COVID-19 pandemic: Current and future perspectives**

Diagnosis of bronchogenic carcinoma during COVID-19 pandemic

### Abstract

Patients with bronchogenic carcinoma comprise a high-risk group for COVID-19, pneumonia and related complications. Symptoms of COVID-19 related pulmonary syndrome may be similar to deteriorating symptoms encountered during bronchogenic carcinoma progression. These resemblances add further complexity for imaging assessment of bronchogenic carcinoma. Similarities between clinical and imaging findings can pose a major challenge to clinicians in distinguishing COVID-19 super-infection from evolving bronchogenic carcinoma, as the above-mentioned entities

Resumption of Non-Urgent Care

Covid-19 I

The ACR fully supports and recommends compliance with the Centers for Disease Control and Prevention (CDC) guidance that advises medical facilities to "reschedule non-urgent outpatient visits." This includes non-urgent imaging and fluoroscopy procedures, including but not limited to: screening mammography, lung cancer screening, non-urgent computed tomography (CT), ultrasound, plain film X-ray exams, magnetic resonance imaging (MRI) and other non-emergent or elective radiologic and radio...
