Around the world, recommendations for cancer treatment are being adapted in real time in response to the pandemic of COVID-19. We, as a multidisciplinary team, reviewed the standard management options, according to the Barcelona Clinic Liver Cancer classification system, for hepatocellular carcinoma.

INTRODUCTION. Hepatocellular carcinoma (HCC) is an aggressive tumor that often occurs in the setting of chronic liver disease and cirrhosis (see "Epidemiology and risk factors for hepatocellular carcinoma"). It is typically diagnosed late in its course, and the median survival following diagnosis is approximately 6 to 20 months []. Although the mainstay of therapy is surgical resection, the ...

Management of patients with liver derangement during the ...

[https://www.thelancet.com/journals/langas/article/PIIS2468-1253\(20\)30190-4/fulltext](https://www.thelancet.com/journals/langas/article/PIIS2468-1253(20)30190-4/fulltext)

Among the various treatment methods for hepatocellular carcinoma, surgical resection would be affected the most during the COVID-19 pandemic. On one hand, the demand to expand ventilation capacity for patients with COVID-19 has resulted in a shortage of anaesthetists to support surgery and other procedures such as ablation, which require a ...
