#### **SPECIFIC COMMENTS TO AUTHORS**

It is a well-written paper concluding that the combination of PP and HFNO could benefit spontaneously breathing, severe COVID-19 patients. It improves the clinical symptoms, oxygenation status, and radiological features of lung injury. However, the author needs to attend to some minor points before the article can be taken further. The conventional oxygen therapy (COT) term has not been mentioned in the abstract. So, it is better to remove from keywords. Hypoxemia and Intubation must be included in the keywords of the abstract. The author does not mention the limitations of the case in the discussion portion. It is better to add few lines about the same. The manuscript is acceptable for publication with dealing above points.
