Dear editor,

Please find attached files of revised manuscript in word format

Title: The value of refined care in the patients with AECOPD

Author: Na Na¹, Suling Guo², Yingying Zhang³, Mei Ye⁴, Na Zhang⁵, Guixia Wu⁶, Lewei Ma⁷

Name of Journal: World Journal of Clinical Cases

Manuscript NO: 63188

First of all, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

Reviewer: 02855868

Acute exacerbation of chronic obstructive pulmonary disease is a complex pathological change in the course of chronic obstructive pulmonary disease. Sputum can passively move with the cilia in the airway, gradually expel the sputum from the depths of the airway, and cough out the sputum by stimulating the sensory nerve on the surface of the airway to cough out of the body under physiological conditions. It can lead to sputum accumulation and affect the exchange of oxygen and carbon dioxide in the lungs when sputum is thick, cough is weak, or tracheal cilia is abnormal. The implementation of nutritional nursing can improve the physical quality of patients and improve immune function through the management of respiratory tract, improve the condition of patients and improve the comfort of respiratory tract. In this study, Na et al investigated on the effect of refined nursing strategies on patients with chronic obstructive pulmonary disease with dysphagia. Overall, this study is very interesting, and the manuscript is very well written. Comments: 1. The manuscript required a minor language editing. Some minor language polishing should be revised. 2. Title is too long, please short it. 3. A background should be added to the abstract. And results are too long in

the abstract. 4. The results are reasonable, and well discussed. 5. A conclusion should be made in the main text. 6. References should be edited.

Thank you for your advice.

After receiving the comments, we read the article carefully and found some small loopholes in the language of the article and made modifications. We shortened the title, added a background section to the abstract and enriched the discussion section. We made conclusions in the main text and changed the the references.

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,

Lewei Ma
