Predicting Acute Exacerbations in Chronic Obstructive ...
<https://pubmed.ncbi.nlm.nih.gov/29485951>
 Patients with exacerbations had slightly more comorbidities, medication use, and health care resource utilization compared with patients without exacerbations. In the base model, sensitivity was 41.6% and specificity was 85.5%. Positive and negative predictive values were 66.2% and 68.2%, respectively.

Acute exacerbation of chronic obstructive pulmonary ...
<https://www.ncbi.nlm.nih.gov/pubmed/20624789>
 Spirometry was performed in 28.3% of the patients. The number of acute exacerbations in the last year was 3.34±2.5; 98.7% had increased expectoration, 87.5% increased dyspnea, 64.4% increased sputum purulence, and 43.5% fever. A total of 6.1% (n = 53) of patients were hospitalized due to exacerbation.

Pulmonary rehabilitation after acute exacerbation of ...

<https://pubmed.ncbi.nlm.nih.gov/19561523>

Abstract. Purpose: Acute exacerbations of chronic obstructive pulmonary disease (AECOPD) impair health-related quality of life (HRQL). We evaluated the effect of an abbreviated repeat pulmonary rehabilitation (PR) program on HRQL after an AECOPD. Methods: Patients who had completed PR were followed for up to 12 months to identify an AECOPD and then placed in randomized groups to receive a 3-week repeat-PR intervention or usual care.

Feb 14, 2009 · Introduction. Acute exacerbation of chronic obstructive pulmonary disease (AECOPD) is a common presentation in the emergency department (ED), with an estimated 600,000 ED visits in the USA in 2005 [].Despite its importance, research on quality of AECOPD care has received disproportionately less attention.
