## Inflammatory Bowel Disease

Medical Condition

A group of intestinal disorders that cause inflammation of the digestive tract.

- 👤 Common (More than 200,000 cases per year in US)
- 👤 Often requires lab test or imaging
- 👤 Treatments can help manage condition, no known cure
- 👤 Can be lifelong

IBD is said to be the result of autoimmune reactions. Inflammatory bowel disease (IBD) presents as Crohn's disease or ulcerative colitis. It may be characterized by diarrhea, abdominal pain and cramping, tiredness, and weight loss. Anti-inflammatory drugs play an important role in the treatment. Surgery is sometimes performed.

### Symptoms

Symptoms may vary from mild to severe and include:

- Diarrhea
- Fever
- Fatigue
- Blood in stool
- Bleeding ulcers
- Stomach pain
- Bloating and cramping
- *Dark-stool symptoms*

Introduction. Current goals of therapy for inflammatory bowel disease (IBD) are the induction and maintenance of inflammatory symptoms in order to provide an improved quality of life, to reduce the need for long-term corticosteroids, and to reduce other long-term outcomes such as disability, hospitalization and colorectal cancer (CRC). Although the success of this latter goal has been ...
