SPECIFIC COMMENTS TO AUTHORS

The authors intended to clarify each of potential risk factors of constipation and to identify demographic, lifestyle and health-related factors reported to be associated with constipation and evaluate the evidence for each factor. This is a very meaningful review on such aspect, I think the authors give a very convincing summary on the risk factors of constipation. Although there could be some selection bias such as language and races, this is a high quality review and can be published.

SPECIFIC COMMENTS TO AUTHORS

The paper is well developed, but it does not really provide novel ideas for a subject so studied in the scientific literature.
