SPECIFIC COMMENTS TO AUTHORS

very good work but still want to share these points: regarding the word pandemics through the text in many places, I advise to make sure of it as we are talking about one pandemic in definition second, Singh et al paper on page 10 that attributed findings to age being older, is it by chance. Did you check that as UC is also seen in young but we need to make sure about the representative nature of the research third, regarding the references.. be sure not to conflict with the guideline as too many authors are written name by name (long list with long lists)
