Retrospective Study

Facilitators and barriers to colorectal cancer screening in an outpatient setting

Determinants of colorectal cancer screening

Abstract

BACKGROUND

Colorectal cancer (CRC) is the third most common cancer and the second leading cause of cancer-related deaths in the United States. Still, 1 in 3 adults aged 50 to 75 years have not been screened for colorectal cancer. Early detection and management of precancerous or malignant lesions has been shown to improve overall mortality.

AIM

This study aimed to determine the most significant facilitators and barriers to colorectal

Barriers and Facilitators of Colorectal Cancer Screening ...

<https://www.jabfm.org/content/32/2/180> ▾

Mar 01, 2019 · Introduction: Colorectal cancer is a leading cause of cancer-related mortality in the United States. Current screening recommendations for individuals aged 50 to 75 years include colonoscopy every 10 years, flexible sigmoidoscopy every 5 years, or annual stool-based testing. Stool-based testing, including fecal immunochemical tests (FITs), are cost effective, easy to perform at ...

Barriers and facilitators for colorectal cancer screening ...

<https://pubmed.ncbi.nlm.nih.gov/32885219>

Background: Colorectal cancer (CRC) incidence and mortality are increasing in many low- and middle-income countries (LMICs), possibly due to a combination of changing lifestyles and improved healthcare infrastructure to facilitate diagnosis. Unfortunately, a large proportion of CRC cases in these countries remain undiagnosed or are diagnosed at advanced stages, resulting in poor outcomes.

Barriers of and facilitators to physician recommendation ...

<https://pubmed.ncbi.nlm.nih.gov/17939007>

Background: Colorectal cancer screening (CRCS) has been demonstrated to be effective and is consistently recommended by clinical practice guidelines. However, only slightly over half of all Americans have ever been screened. Patients cite physician recommendation as the most important motivator of screening.

Colon Cancer

Medical Condition

A condition characterized by severe abdominal pain and changes in bowel movemnets

Cancer that begins in the last part of the digestive tract-colon (large intestine).

Common (More than 200,000 cases per year in US)

Requires lab test or imaging

Treatable by a medical professional

Can last several years or be lifelong

The exact cause is not known. Non-cancerous polyps in colon may become cancerous. Abdominal pain, bloody stool, bloating, fatigue and weight loss are the commonly noted symptoms. Treatment involves surgery and chemotherapy.

Symptoms

Many people have no symptoms until the later stages of cancer The symptoms include:

- Diarrhea
- Constipation
