### [Anderson-Fabry Disease and Other Lysosomal Storage ...](#)

<https://www.ahajournals.org/doi/10.1161/CIRCULATIONAHA.114.009789>

Anderson Fabry Disease. This **disease** is caused by the deficient activity of  $\alpha$ -galactosidase A ( $\alpha$ -Gal A), which leads to the lysosomal accumulation of globotriaosylceramide. Its inheritance is X-linked and males are usually more frequently and more severely affected than females, and at a younger age.

Introduction. Fabry **disease** (FD) is an X-linked genetic **disease** caused by mutations in the GLA gene, which encodes  $\alpha$ -galactosidase A, leading to an intralysosomal accumulation of globotriaosylceramide (Gb3) in a wide variety of cells. Thus, FD usually presents with multiorgan damage: cardiac (hypertrophic cardiomyopathy), renal (chronic kidney **disease**, proteinuria), neurological (stroke ...
