SPECIFIC COMMENTS TO AUTHORS

This paper is a case report regarding the perianal superficial CD34-positive fibroblastic tumor (SCPFT). As in a review paper with 41 patients (Int J Clin Exp Pathol 2020;13:38-43), some rare SCPFTs including the diseases developed in the groin and the vulva, were reported. However, this perianal SCPFT is the first case. I would like to provide some comments to be addressed. Comments: 1) A case report can provide the physicians with the information of the rare disease. Thus, detailed clinical backgrounds should be kindly shown to the readers. I would recommend the authors to generate a table to summarize the clinical data. In particular, the data regarding the inflammation (white blood cells, percentage of neutrophils, C-reactive protein, etc) 2) In relation to my comment No.1, this case was misdiagnosed as having the perianal abscess. The authors should mention essential clinical features (fever, anal pain, redness around the tumor, etc).

SPECIFIC COMMENTS TO AUTHORS

The authors reported on a new case of of primary superficial CD34 positive fibroblastic tumor. The tumor is rare and the localization unique: thus the case deserves publication. The clinical description of the case is complete and the histological characterization adequate.
