Gastric Syphilis Mimicking Adenocarcinoma: A Case Report

<https://pubmed.ncbi.nlm.nih.gov/16778406>

Syphilis is an unexpected diagnosis in the stomach, and the reduced incidence of syphilis has made its clinical presentation less widely appreciated. We report a 43-yr-old man suffering from epigastric tenderness with an initial diagnosis of gastric carcinoma; gastric syphilis was confirmed by demonstrating spirochetes in a gastric biopsy specimen by silver impregnation.

Jun 21, 2006 · Gastric carcinoma must be considered in 85-95% of patients with gastric syphilis as in the present case. The histologic diagnosis of syphilis is exceedingly difficult. Common histologic changes include thickened arterial walls with perivascular round cell infiltrates, and markedly thickened submucosa with diffuse infiltration of lymphocytes and plasma cells as well as endovasculitis.
