#### **SPECIFIC COMMENTS TO AUTHORS**

- The bacterial name should be stated in italicized font. - In the abstract section; the case presentation and conclusion can be more interesting to cover main findings of study. - Core tip is not appropriate. The author should suggest main findings of the study, and discuss about key diagnosis and therapeutic point using their own experiences and literature review. - Introduction was too small. - The author should specify the purpose of the study in last paragraph in the introduction section. - The figure resolution was not sufficient; in addition, figure legends should support your figure entirely, meaning that the reader of your paper should be able to understand your figure. I suggest use arrow and etc. to give more details. - please give more details about Treatment and Outcomes and follow-up such as treatment duration, adverse event, etc. - In discussion section, the author should make a table regarding your case and all previous published cases you mention in the discussion, with all characteristics and treatment approach, duration of treatment and outcomes, etc. - Conclusion and Core tip was repetitive, it is not acceptable. The authors should substantially revise the conclusion.

### SPECIFIC COMMENTS TO AUTHORS

Well revised; although, bacterial name was not italic.
