SPECIFIC COMMENTS TO AUTHORS

In this article, the author presents a review of the extensive literature on celiac disease in children. My criticism is minor. In abstract „ Serologic tests for celiac disease should be done in patients with...„ add also „in children who belong to specific groups at risk„. Sentence „Symptoms usually occur after ingestion of gluten containing grains between 4 and 24 months„ should be changed in „ „Symptoms usually occur in children between 4 and 24 months, after ingestion of gluten containing grains„ to avoid misunderstanding.

Author should make a difference between Non-responsive celiac disease and Refractory celiac disease, because in this content this difference is not clear. Causes of non-response CD include persistent gluten ingestion (the most common cause) and incorrect initial diagnosis, but in Refractory CD despite strict adherence to a gluten diet malabsorptive symptoms and villous atrophy have been persisting. In the part of Diagnosis the author made a mix between three policy statements - two by ESPGHAN (2012 and 2020) and NASPGHAN (2016). Every Statement is demanding by itself, but a combination of all of them makes this performance very complicated even for pediatric gastroenterologists. However, the author has a right to express his own opinion and it's his personal approach to this problem, not a policy statement. This is a quality review report and I recommend it for publishing
