SPECIFIC COMMENTS TO AUTHORS

I read the manuscript with interest. The study is very interesting. The title is appropriate. Appropriate abstract. Well written results and discussion. It is not clear how the diagnosis of bleeding was made. It is not clear what type of instrumental and / or radiological investigations were used. The authors should provide some clarification in this regard. The tables are complete and exhaustive.

SPECIFIC COMMENTS TO AUTHORS

We read with interest the submitted article about LGIB in patients with Crohn's disease. The following comments are for the authors: 1. How was the diagnosis of LGIB made? 2. Why was rectal bleed excluded? 3. Is it possible that the use of thiopurines is associated with mild disease and hence the less risk of LGIB. So is it more of association rather than causation. The same may apply to the use of biologic agents which is usually associated with a more advanced disease. 4. What is the definition of "acute severe" LGIB? 5. What is the definition of "early use" of thiopurines? 6. How are the results different from previous studies cited by the authors? Thank you for the effort you put into this work
