**Pancreatic cancer: A review of epidemiology, trend and risk factors**

Epidemiology, trend and risk of PDAC

### Abstract

Despite rapid advances in modern medical technology and significant improvements in survival rates of many cancers, pancreatic cancer is still a highly lethal gastrointestinal cancer with low five-year survival rate and difficulty in early detection. At present, the incidence and mortality of pancreatic cancer are increasing year by year worldwide, no matter in the United States, Europe, Japan, or China. Globally, the incidence of pancreatic cancer is projected to increase to 18.6 per 100 000 in 2050, with the average annual growth of 1.1%, meaning that pancreatic cancer will pose a significant public health burden. Due to the special anatomical location of the pancreas, the development

## Epidemiology and risk factors of pancreatic cancer

<https://pubmed.ncbi.nlm.nih.gov/30561407>

**Epidemiological** data shows that **pancreatic cancer** is not very common but obvious it is one of the most neoplastic death-cause in the world. The **trend** of incidence is quite increasing through years, proportionally to the increase of **risk factors**. About **risk factors**, it is not easy to detect in all the cases but it is known the role of some of that: there are hereditary **risk factors**, such as genetic pattern like ...

Feb 26, 2019 · To date, the causes of pancreatic carcinoma are still insufficiently known, although certain risk factors have been identified, such as tobacco smoking, diabetes mellitus, obesity, dietary factors, alcohol abuse, age, ethnicity, family history and genetic factors, Helicobacter pylori infection, non-O blood group and chronic **pancreatitis**.

## Pancreatic Cancer

Medical Condition

Cancer of pancreas, an organ which is behind the lower part of the stomach. This causes abdominal pain, jaundice, itchy skin, fatigue and weight loss.

 Rare (Fewer than 200,000 cases per year in US)

 Often requires lab test or imaging

 Treatable by a medical professional

 Can last several months or years

The exact cause of pancreatic cancer is unknown. Risk factors include diabetes, chronic pancreatitis and stomach ulcer. In the early stage, it is asymptomatic. Common symptoms at later stages are weight loss and abdominal pain. Treatment depends on the location of tumor, age and general health. Treatment includes surgery, chemotherapy and radiation.

## Symptoms

Early stage of pancreatic cancer may be asymptomatic. Symptoms will
