Growth hormone cocktail improves hepatopulmonary syndrome secondary to hypopituitarism: A case report

Ji W *et al.* Growth hormone cocktail for HPS

Wen Ji, Min Nie, Jiang-Feng Mao, Hong-Bing Zhang, Xi Wang, Xue-Yan Wu

Abstract

BACKGROUND

Metabolic associated fatty liver disease frequently occurs in patients with hypopituitarism and growth hormone (GH) deficiency. Some patients may develop to hepatopulmonary syndrome (HPS). HPS has a poor prognosis and liver transplantation is regarded as the only approach to cure it.
