Abstract

Current guidelines for treating asymptomatic common bile duct stones (CBDS) recommend stone removal, with endoscopic retrograde cholangiopancreatography (ERCP) being the first treatment choice. When deciding on ERCP treatment for asymptomatic CBDS, the risk of ERCP-related complications and outcome of natural history of asymptomatic CBDS should be compared. The incidence rate of ERCP-related

Jul 01, 2008 · Whilst Collins et al²² have suggested that a third of patients with CBDS at the time of cholecystectomy pass their stones spontaneously within 6 weeks of surgery, it is not known with what frequency stones enter the common bile duct (CBD), or why some stones pass silently into the duodenum and others do not. What is clear is that when ductal stones do become symptomatic the ...
