Medical nutritional therapy for renal transplantation in the COVID-19 pandemic

Akbulut G *et al.* Nutrition for renal transplantation

Gamze Akbulut, Feray Gencer-Bingol

Abstract

Nutritional therapy is very important at renal transplantation. Nutrition has become more vital for transplantation patients owing to the coronavirus disease 2019 (COVID-19) pandemic. Inadequate nutrition can negatively affect the immune system. For this reason, adequate protein and energy intake should be provided to the patients. Also, overconsumption of saturated fat, sugar, and refined carbohydrates can both negatively affect the immune system and trigger chronic diseases in transplantation patients. In
