

**Language statement of manuscript entitled  
High doses of catecholamines activate glucose transport in human adipocytes  
independently from adrenoceptor stimulation or vanadium addition  
submitted to Word Journal of Diabetes**

Dear members of the Editorial board of WJD at BPG,  
As equivalent to an editing certificate for the enclosed manuscript, all the co authors can attest that the manuscript has been scrutinised by a colleague who spent six years at the Univ. of California - Los Angeles (UCLA) as post-doctorant. Although not native English speaker, this colleague has the required grasp of knowledge for extensive language editing, as well as many other co-authors, who worked on the draft and who already wrote scientific reports. We all expect that no further language polishing is necessary before publication in the World Journal of Diabetes. If this becomes the case, we attest all our confidence to Joan Webster, who polished the style of one of our previous manuscript submitted to WJD.

On behalf of all co-authors,  
Christian Carpéné
