(7) Data on side effects of psychotherapy are scarce (Linden and Schermuly-Haupt, 2014). (8) It is unclear whether the effect sizes from randomized clinical trials approximate real-world effectiveness (Sherman et al., 2016). Patients seen in clinical practice usually show concomitant disorders but are

Apr 21, 2021 - The first ERAS consensus statement 3 was published in 2005 and heralded a **paradigm shift** in perioperative care for colorectal surgery, emphasizing multidisciplinary work, patient partnership, evidence-based interventions, and audit. This publication led to a global change in practice during the subsequent 15 years.

Future perspectives: enhanced recovery in colorectal surgery

<https://ales.amegroups.com/article/view/6139/html> ▾

A systematic review assessing exercise regimens by O'Doherty et al. reported on 10 studies, 4 of which were randomised controlled trials (RCT), regarding patients awaiting major abdominal surgery. Of these studies, seven used peak VO₂ as their primary outcome and reported an improvement in this parameter following prehabilitation (7).
