SPECIFIC COMMENTS TO AUTHORS

The author reported a case of disseminated *Fusarium* bloodstream infection in a child with AML, and made a comprehensive discussion on its clinical diagnosis and treatment. However, since there have been many similar reports at present, it is suggested that the author highlight the characteristics of this article and the advantages of the treatment method adopted by the author. Secondly, the discussion on the treatment of this disease in the article needs to be improved. For example, surgical resection of the lesion is not mentioned. In addition, the language expression of the article needs to be improved.
