To,

The Editor,

World Journal of Virology

Sub: Manuscript # 64988 revision

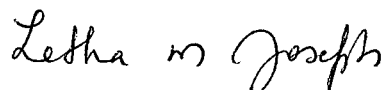

Dear editor,

I revised the original manuscript and made the following changes based on the peer review recommendations.

Requested revision	Revision made
1. The keywords section should remove words "ageism" and "social media"	Removed
2. Most of the views just stop at the description without going into the analysis of the phenomenon based on psychological theories.	Added analysis based on psychological theories. Following theories and models are included in the manuscript: Neuman's systems model, Maslow's hierarchy of needs, interpersonal theory of suicide, and the strength and vulnerability integration (SAVI) model
3. The "Author Contributions" section is missing. Please provide the author contributions	Added
4. Please add table/figure to this review.	Created a table. (Table 1 Studies Exploring the Impact of Pandemic on Mental Health)

Kindly let me know if you have additional suggestions.

Sincerely,

Letha Joseph, DNP, APRN, AGPCNP-BC
